

discussion of mitigation measures.

[3]①Most scientists and experts sharply dispute Hardy's views. ②“They casually dismiss the career work of scholars and scientists as just another misguided opinion.” says Dan Quinn, senior communications strategist at the Texas Freedom Network, a non-profit group that monitors public education. ③“What millions of Texas kids learn in their public schools is determined too often by the political ideology of partisan board members, rather than facts and sound scholarship.”

[4]①Such debates reflect fierce discussions across the US and around the world, as researchers, policymakers, teachers and students step up demands for a greater focus on teaching about the facts of climate change in schools.

[5]①A study last year by the National Center for Science Education, a non-profit group of scientists and teachers, looking at how state public schools across the country address climate change in science classes, gave barely half of US states a grade B+ or higher. ②Among the 10 worst performers were some of the most populous states, including Texas, which was given the lowest grade (F) and has a disproportionate influence because its textbooks are widely sold elsewhere.

[6]①Glenn Branch, the centre's deputy director, cautions that setting state-level science standards is only one limited benchmark in a country that decentralises decisions to local school boards. ②Even if a state is considered a high performer in its science standards, “that does not mean it will be taught”, he says.

[7]①Another issue is that, while climate change is well integrated into some subjects and at some ages—such as earth and space sciences in high schools—it is not as well represented in curricula for younger children and in subjects that are more widely taught, such as biology and chemistry. ②It is also less prominent in many social studies courses.

[8]①Branch points out that, even if a growing number of official guidelines and textbooks reflect scientific consensus on climate change, unofficial educational materials that convey more slanted perspectives are being distributed to teachers. ②They include materials sponsored by libertarian think-tanks and energy industry associations.

期气候变化中的首要影响，并鼓励关于缓解措施的讨论。

(22) 大多数科学家和专家都对哈迪的观点提出了尖锐的质疑。“他们随意否定学者和科学家的工作成果，将其视为又一种错误的观点。”得克萨斯自由网络的高级通信策略师丹·奎因说，得克萨斯自由网络是一个监督公共教育的非营利组织。“数百万得克萨斯州的孩子在他们的公立学校里学到的东西往往是由具有一定倾向的董事会成员的政治意识形态决定的，而不是由事实和可靠的学术研究决定的。”

此类辩论反映出美国乃至世界各地的激烈讨论，因为研究人员、政策制定者、教师和学生越来越多地要求加强关注在学校教授有关气候变化的事实。

(23) 国家科学教育中心是一个由科学家和教师组成的非营利组织，该中心去年进行了一项研究，研究了全国各地的州公立学校在科学课堂上处理气候变化问题的方式，结果给了美国仅有一半的州 B+ 或更高的分数。在表现最差的 10 个州中有一些人口最为密集的州，其中包括得克萨斯州，该州的等级被评为最低 (F)，而该州因其教科书在其他地方广为销售而具有特别大的影响力。

(24) 该中心的副主任格伦·布兰奇提醒道，在一个将决策权下放给地方学校委员会的国家，制定州级科学标准只是一个有限的基准。即使一个州被认为在科学标准方面表现优异，“那也并不意味着气候变化会被教授”，他表示。

另一个问题是，虽然气候变化被很好地纳入一些科目和一些学段——如高中的地球与空间科学——但它在低龄儿童的课程和更广泛教授的科目（如生物学和化学）中同样没有得到体现。它在许多社会研究课程中也不太突出。

(25) 布兰奇指出，虽然越来越多的官方指南和教科书反映对气候变化的科学共识，但正在向老师分发的仍是传达了更带有偏向性观点的非官方教学材料。其中包括由自由主义智囊团和能源产业协会赞助的材料。
