Text 4 选自 2020 年 12 月 1 日的 *The Scientist* (《科学家》)，原文标题是 “Citations Are the Currency of Science” (《引用是科学的货币》)。文章主要围绕科学论文引用乱象以及如何遏制该现象所展开。

题目设置：36 题至 40 题均为细节理解题。

Q 英汉对照

[1] ①Scientific papers are the recordkeepers of progress in research. ②Each year researchers publish millions of papers in more than 30,000 journals. ③The scientific community measures the quality of those papers in a number of ways, including the perceived quality of the journal (as reflected by the title's impact factor) and the number of citations a specific paper accumulates. ④The careers of scientists and the reputation of their institutions depend on the number and prestige of the papers they produce, but even more so on the citations attracted by these papers.

[2] ①Citation cartels, where journals, authors, and institutions conspire to inflate citation numbers, have existed for a long time. ②In 2016, researchers developed an algorithm to recognize suspicious citation patterns, including groups of authors that disproportionately cite one another and groups of journals that cite each other frequently to increase the impact factors of their publications. ③Recently, another expression of this predatory behavior has emerged: so-called support service consultancies that provide language and other editorial support to individual authors and to journals sometimes advise contributors to add a number of citations to their articles.

[3] ①The advent of electronic publishing and authors' need to find outlets for their papers resulted in thousands of new journals. ②The birth of predatory journals wasn't far behind. ③These journals can act as milk cows where every single article in an issue may cite a specific paper or a series of papers. ④In some instances, there is absolutely no relationship between the content of the article and the citations. ⑤The peculiar part is that the journal that the editor is supposedly working for is not profiting at all—it is just providing citations to other journals. ⑥Such practices can lead an article to accrue more than 150 citations in the same year that it was published.

[4] ①How insidious is this type of citation manipulation? ②In one example, an individual—acting as author, editor, and consultant—was able to use at least 15 journals as citation providers to articles published by five scientists at

科学论文是研究进展的记录者。每年，研究人员在 3 万多种期刊上发表数百万篇论文。科学界通过多种方式来衡量那些论文的质量，包括期刊的感知质量(由标题的影响因子反映)和特定论文的累计被引用次数。(36) 科学家的职业生涯和他们所在机构的声誉取决于他们所发表的论文的数量和声望，但更多的是取决于这些论文所吸引的引用次数。

引用卡特尔，即期刊、作者和机构合谋夸大被引用次数的组织，存在已久。2016 年，研究人员开发了一种算法来识别可疑的引用模式，包括成群的很大比例上相互引用的作者，以及大量的频繁相互引用以增加其出版物影响因子的期刊。最近，这种掠夺性行为的另一种表现形式已经出现了：(37) 所谓的支持服务咨询公司为独立作者和期刊提供语言和其他编辑支持，有时会建议投稿者在他们的文章中添加一些引文。

电子出版的问世和作者为他们的论文寻找出路的需求导致了数以千计的新期刊的出现。掠夺性期刊的诞生紧随其后。(38) 这些期刊就像奶牛一样，每期期刊上的每一篇文章都能引用一篇特定论文或一系列论文。在某些情况下，文章的内容和引文之间完全没有关系。(38) 奇怪的是，据称编辑为之工作的期刊根本没有盈利——它只是向其他期刊提供引文。这样的做法可能会导致一篇文章在发表的同一
年内被引用超过 150 次。

这种类型的引用操纵有多狡猾？举一个例子，一个人——作为作者、编辑和顾问——能够使用至少 15 种期刊为三所大学的五名科学
